

Supplementary Figure S1: Sources of cfDNA in Cerebral Organoids During Growth.  
Proportion of cfDNA sequencing reads contributed by rodent and human sources on growth days 10, 21, and 41.

Supplementary Figure S2: Definition of regions of interest (ROI) in cerebral organoid-derived cfDNA sequencing data. Shown is a representative view of sequenced reads in cfDNA samples derived from cerebral organoids (CO), Macs2-identified peaks, intersection of peaks present in all three replicates, and union of peaks (ROI)
